SUMMARY

AI and GenAI Engineer building owned LLM and RAG systems with Python, FastAPI, LangChain, LangGraph, LangSmith, and Postgres. Targeting junior GenAI and applied LLM roles.

SKILLS

Python, SQL, LangChain, LangGraph, LangSmith, Docker, Kubernetes, TensorFlow, Cursor, OpenAI API, Retrieval-Augmented Generation (RAG), embeddings, SQLite, Pydantic, Streamlit, PyTorch, torchvision, scikit-learn, NumPy, pandas, Matplotlib, Seaborn, Pillow, Hugging Face Transformers, Hugging Face Datasets, Hugging Face Hub, PEFT, LoRA, TRL, Unsloth, bitsandbytes, 4-bit quantization, Accelerate, Sentence Transformers, Jupyter Notebook, pypdf, Ruff, unittest

PROJECTS

Harry Potter RAG Knowledge Assistant | Python, LangChain, LangGraph, LangSmith, OpenAI, SQLite, Streamlit | github.com/pritamexe2k4-cmyk/harry_potter_project

- Built a citation-grounded RAG assistant over all 7 novels and The Cursed Child: 4,845 chapter-aware passages extracted with pypdf, embedded with text-embedding-3-small into 8 per-book indexes, and searched with semantic + BM25 rank fusion, reaching 86.2% evidence coverage at 8 passages vs 77.9% for semantic top-4 on 46 benchmark cases.
- Designed a LangGraph workflow in which GPT-4.1 mini drafts a Pydantic-structured answer, GPT-4.1 reviews it, and Python validates every citation ID and supporting quote before saving, with chats stored as SQLite-checkpointed threads that recover after restarts.
- Built a 60-case evaluation suite (7 categories, frozen baseline, failure log) and 88 offline tests, cutting request errors from 18/60 to 0/60 across 9 evaluation checkpoints at a 6.82 s p95 latency, with opt-in LangSmith tracing.

AgentDesk, Multi-Tenant Support Agent (In Progress) | FastAPI, LangGraph, LangChain, LangSmith, Pinecone, Postgres, Redis, MCP, Docker, AWS ECS, Bedrock

- Building a multi-tenant support agent where each company uploads its documents and a LangGraph agent answers with citations, using hybrid BM25 + vector search with rank fusion and Cohere re-ranking across [N] tenants and [N] documents, isolated by Postgres row-level security and Pinecone namespaces.
- Adding MCP tool calling for order lookup and ticket creation, PII and prompt-injection guardrails, LangGraph human approval for risky actions such as refunds, and SSE-streamed responses, targeting [X] percent tool-selection accuracy and [X] successful attacks on a red-team suite.
- Running LangSmith and Ragas evals on a [N]-question test set in GitHub Actions CI, targeting [X] percent answer faithfulness and p95 latency under [N] s at [N] concurrent users, and tracking cost per query per tenant on Docker and AWS ECS with Bedrock as a fallback.

TokenGate, Self-Hosted LLM Gateway (In Progress) | vLLM, FastAPI, LiteLLM, Redis, Postgres, Kubernetes, Prometheus, Grafana, Langfuse

- Building an OpenAI-compatible gateway in front of self-hosted vLLM (Qwen3-8B AWQ) and cloud models (Bedrock, Azure OpenAI), with routing by cost and latency, queue-depth spillover and automatic fallback.
- Adding per-query cost tracking, per-team API keys and budgets, Redis token-bucket rate limiting, and OpenAI-format streaming responses, targeting gateway overhead under [N] ms p95 against a LiteLLM baseline.
- Targeting a [X] percent cost reduction from response caching and p95 latency under [N] ms at [N] concurrent users, measured with load tests on Kubernetes (Helm, KEDA) and monitored in Prometheus, Grafana and Langfuse.

EXPERIENCE

IncluHub, AI Intern to AI Orchestrator, Mar 2026 to Aug 2026 | Fashion social and hiring network, Hyderabad

- Worked across multi-domain teams spanning product, sales, marketing and education to deliver a fashion app live to about 1,000 to 3,000 users and a Student Dashboard used by about 40 to 50 students and 4 to 5 educators.
- Built multiple API and n8n workflow pipelines unifying the Meta Graph, WhatsApp and Ads APIs into one automated flow for ads, leads and follow ups.
- Built internal CRM tools for marketing research and Meta ads client and campaign management, replacing about 7 to 8 Google Sheets and lifting sales team throughput by over 50 percent, from about 100 to 150 incoming leads a day to 70 to 100 calls a day.

ACHIEVEMENTS

- Led HR operations as HR Head at Street Cause, VNR VJIET, in 2024, growing the chapter from 9 to over 30 members and running events for over 300 people.
- Co-authored the NeuroFuse research paper, accepted at IEEE ICCCMLA 2026. It fuses brain MRI and CT scans with a diffusion model, and the tumor classifiers reached 98.2 and 98.9 percent accuracy using ConvNeXt B and ViT.

EDUCATION

VNR VJIET, B.Tech in CSE, AI and ML, Hyderabad, 2022 to 2026
