SUMMARY

Junior AI/ML engineer and IEEE ICCCMLA 2026 co-author (98.2% / 98.9% tumor-classification accuracy) who helped ship a live app to about 1,000 to 3,000 users and built CRM tools that lifted sales throughput 50%+. I want to join an AI team where I can keep learning and build real-world AI products.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL

ML/DL & Vision: PyTorch, torchvision, scikit-learn, OpenCV, ConvNeXt-B, ViT, diffusion models (Diff-IF, DDIM)

GenAI & Backend: LangGraph, RAG (Pinecone), FastAPI, Docker

Web & Data: Next.js, React, Tailwind CSS, Supabase (Postgres, Auth, RLS, Storage), Streamlit

Automation & APIs: n8n, REST APIs, Meta APIs (Graph, WhatsApp, Ads)

Tools: Git, GitHub, Vercel

EXPERIENCE

IncluHub, AI Intern to AI Orchestrator | Fashion social and hiring network, Hyderabad — Mar 2026 – Aug 2026

- Helped ship a fashion app live to about 1,000 to 3,000 users and a Student Dashboard for about 40 to 50 students and 4 to 5 educators, working across product, sales, marketing and education teams.
- Built n8n workflow pipelines on REST APIs that unify Meta APIs (Graph, WhatsApp, Ads) into one automated flow for ads, leads and follow-ups.
- Built internal CRM tools that replaced about 7 to 8 Google Sheets and lifted sales-team throughput by over 50 percent.

PROJECTS

Resolv, Multi-Agent AI Customer Support Platform (Team Project with Venkat Pachala) — 2026

Python, FastAPI, LangGraph, LangSmith, Pinecone, Ollama, Docker, Prometheus, Grafana | GitHub | Live pilot

- Co-built a LangGraph multi-agent pipeline for D2C support (returns, refunds, cancellations) with intent detection, planning, tool execution, verification and QA stages, plus a Pinecone RAG fast-path that answers policy questions without running the full pipeline.
- Added production guardrails: prompt-injection, PII and hallucination checks, verified-customer gating for sensitive actions, and human escalation for high-value refunds, all configurable per brand.
- Added observability and deployment: LangSmith tracing, Prometheus/Grafana metrics and golden-set regression tests, packaged with Docker and running as a public pilot on Render.

IncluHub Student Dashboard — Jul 2026

Next.js, React, TypeScript, Tailwind CSS, Supabase (Postgres, Auth, RLS, Storage) | GitHub | Live

- Built a role-based education ops app (Admin, Educator and Student portals) that replaced sheet-based school operations with institutes, teams, stages, portfolio review and studio check-in.
- Secured every workflow with server actions and Supabase row-level security (RLS) and deployed it live on Vercel.

NeuroFuse, Diffusion-Based MRI and CT Fusion (Team Project) — May 2026

Python, PyTorch, torchvision, OpenCV, Diff-IF, ConvNeXt-B, scikit-learn, Streamlit | GitHub | Demo & files

- Fused MRI and CT scans with the pre-trained Diff-IF diffusion model (DDIM sampling) in a 5-student team; the work was accepted at IEEE ICCCMLA 2026.
- Fine-tuned ConvNeXt-B on fused images for tumor classification at 98.2% accuracy, served per patient in a Streamlit app.

ACHIEVEMENTS

- Co-authored the NeuroFuse paper on diffusion-based MRI and CT fusion, accepted at IEEE ICCCMLA 2026; tumor classifiers reached 98.2% (ConvNeXt-B) and 98.9% (ViT) accuracy.
- HR Head, Street Cause, VNR VJIET (2024): grew the chapter from 9 to 30+ members and ran events for 300+ people.

EDUCATION

VNR VJIET, B.Tech in CSE, AI and ML, Hyderabad — 2022 – 2026
